

RamWorks 2 MEG *Plus* Memory Expander

This guide tells you how to install and configure your RamWorks 2 MEG PLUS Memory Expander card. The RamWorks 2 MEG PLUS Memory Expander is an accessory printed circuit card for both the RamWorks II and RamWorks III extended memory cards. (The 2 MEG PLUS will not work with the original RamWorks card. The original RamWorks had only two rows of RAM chips with a maximum capacity of 512K.)

When installed on either RamWorks II or III, it will provide an additional 1 to 2 megabytes of RAM (Random Access Memory) storage. Unless specifically noted, the name "RamWorks" in these instructions refers to both the RamWorks II and the RamWorks III cards.

AE APPLIED ENGINEERING®

A DIVISION OF AE RESEARCH CORPORATION

V. 1.1

Limited Warranty & Disclaimer

Applied Engineering warrants the 2 MEG PLUS card and memory chips installed by or purchased from Applied Engineering against defects in material and workmanship for a period of 1 year from the date of original retail purchase. If you discover a defect, Applied Engineering will, at its option, repair or replace the product, provided you return the product during the warranty period, transportation prepaid, to Applied Engineering. Prior to returning the product for warranty consideration, call Applied Engineering Technical Support for a return material authorization (RMA) number and shipping instructions.

Even though Applied Engineering has tested the software and reviewed the documentation, Applied Engineering makes no warranty or representation, either express or implied, with respect to software, its quality, performance, merchantability, or fitness for a particular purpose. As a result, this software is sold "as is," and you the purchaser are assuming the entire risk as to its quality and performance.

In no event will Applied Engineering be liable for direct, indirect, special, incidental, or consequential damages resulting from any defect in the software or its documentation, even if advised of the possibility of such damages. In particular, Applied Engineering shall have no liability for any programs or data stored in or used with Applied Engineering products, including the costs of recovering such programs or data.

The warranty and remedies set forth above are exclusive and in lieu of all others, oral or written, express or implied. No Applied Engineering dealer, agent, or employee is authorized to make any modification, extension, or addition to this warranty.

Some states do not allow the exclusion or limitation of implied warranties or liability for incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which may vary from state to state.

This manual and the software (computer programs) described herein are copyrighted by Applied Engineering with all rights reserved. Under the copyright laws, this manual or the programs may not be copied, in whole or in part, without the written consent of Applied Engineering, except in the normal use of the software or to make an archival copy. This exception does not allow copies to be made for others, whether or not sold, but all of the materials purchased (with all archive copies) may be sold, loaned, or given to another person. Under the law, copying includes translating into another language or format. You may use this software on any computer owned by you but extra copies cannot be made for this purpose.

Applied Engineering cannot guarantee that you will receive notice of revisions to the software or products described in this manual. Be sure to check with your dealer or Applied Engineering for information on possible updates.

Installing the 2 MEG+

- First, TURN OFF THE POWER SUPPLY.
- Remove the cover from your Ile.

- Discharge any static electricity on your body by touching the Ile power supply case before touching any of the components.

- * Warning! Don't ZAP your chips! There are many static sensitive components in the Ile and on the RamWorks and 2 MEG+ Memory Expander cards. Be sure that you touch the power supply case before continuing.

- Remove the RamWorks card.
- Carefully line up the pins on the underside of the 2 MEG+ Expander with the corresponding sockets on the chip side of the RamWorks card. Refer to the illustration below.

- Press the pins gently but firmly into the sockets until they are fully seated. (Even when it's fully seated there may still be some of the pin showing between the connectors, so don't press too hard!)

- .. Now, re-install the expanded RamWorks following the installation instructions in your user's manual

Testing Your 2 MEG+

After installing the Expander card, you should test it by running the RamWorks Memory Test on the AppleWorks 2 Expander disk (Version 1.3) or the Super AppleWorks Desktop Expander disk. The test will display X's on empty sockets and bad chips. Those sockets containing good chips will be displayed as clear rectangles.

Adding Even More Memory...

There are sixteen RAM chip sockets on the 2 MEG+ Expander which can accommodate from 1 to 2 megabytes of RAM, using groups of eight 1 megabit dynamic RAM chips.

Memory chips with the correct specifications can be obtained at some computer or electronics parts stores, or you can get them through Applied Engineering; possibly at a lower cost. Because Applied Engineering gets bulk-quantity discounts on its purchases of memory chips, we can often offer them at lower prices. We use high-quality memory chips and warrant them for 5 years. (Most electronics parts vendors sell their chips 'as is.')

With Æ memory chips you are also assured of getting the right chips.

Memory Chip Installation

Memory on the 2 MEG+ Expander is organized into two BLOCKS, shown as A and B in the illustration below. Each block must be completely empty or completely populated with 8 D-RAM chips. It is recommended that you fill block A first, then block B. (See graphic following.)

It is extremely important to insert the Expander's memory chips properly. The illustration shows the correct orientation of the RAM chips and which memory chip sockets are allocated to each block on the 2 Meg+ Expander. Note the position of the notch (or dot on some chips). Each RAM chip should have all legs fully seated in the socket and in the correct position.

OOPS! If power is applied to a chip that is plugged in backwards, the chip will probably be zapped immediately. The chip will be damaged. However, no harm should be done to the board.

Note: You may return your RamWorks card and/or RamWorks Memory Expander to Applied Engineering for a memory upgrade with no additional charge for the installation or testing. Call Applied Engineering Sales for the latest memory chip prices. The sales office phone number is (214) 241-6060.

Bank Configuration for Programmers

The table below shows the relationship between the chips and the bank numbers. From this table you can determine the addressable banks for each of the chips. The bank designations are in hexadecimal notations.

Block A	\$10	\$11	\$12	\$13
	#14	\$15	\$16	\$17
	\$30	\$31	\$32	\$33
	\$34	\$35	\$36	\$37

Block B	\$50	\$51	\$52	\$53
	\$54	\$55	\$56	\$57
	\$70	\$71	\$72	\$73
	\$74	\$75	\$76	\$77

Problems?

If you require more information on using the expanded memory, please see your RamWorks II or RamWorks III Users Manual. If you encounter any difficulties in the installation or use of the card, contact the dealer from whom you purchased the card. Most dealers are knowledgeable about the products they sell and will be able to help you. In the event that the dealer is not able to solve the problem, contact an Applied Engineering Technical Support representative. Applied Engineering's Technical Support representatives are technicians dedicated to helping you by answering your specific questions about Applied Engineering products.

- * *Note:* You **MUST** have a Return Material Authorization Number (RMA) for any items sent for service to Applied Engineering Technical Support. Not having an RMA will cause delays and create additional expense.
